

A Review of Key Networking Concepts

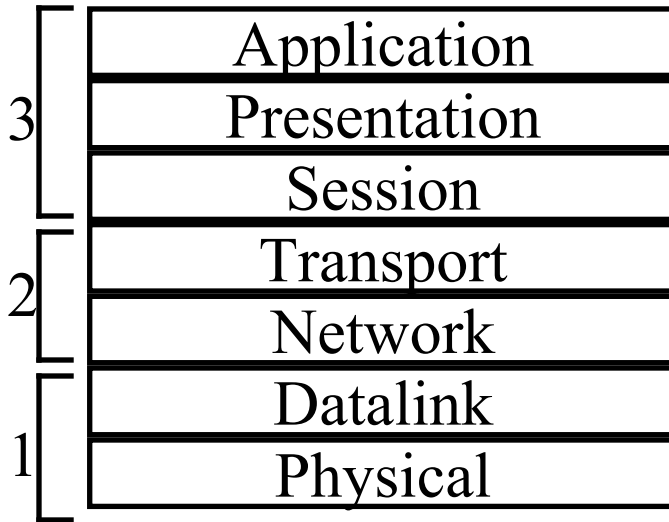

Raj Jain

**Raj Jain is now at
Washington University in Saint Louis
Jain@cse.wustl.edu
<http://www.cse.wustl.edu/~jain/>**

- ❑ ISO/OSI and TCP/IP Reference Model
- ❑ Ethernet, Fast Ethernet, Gigabit Ethernet
- ❑ Interconnecting Devices: Hubs, bridges, routers

ISO/OSI Reference Model

File transfer, Email, Remote Login
ASCII Text, Sound
Establish/manage connection
End-to-end communication: TCP
Routing, Addressing: IP
Two party communication: Ethernet
How to transmit signal: Coding

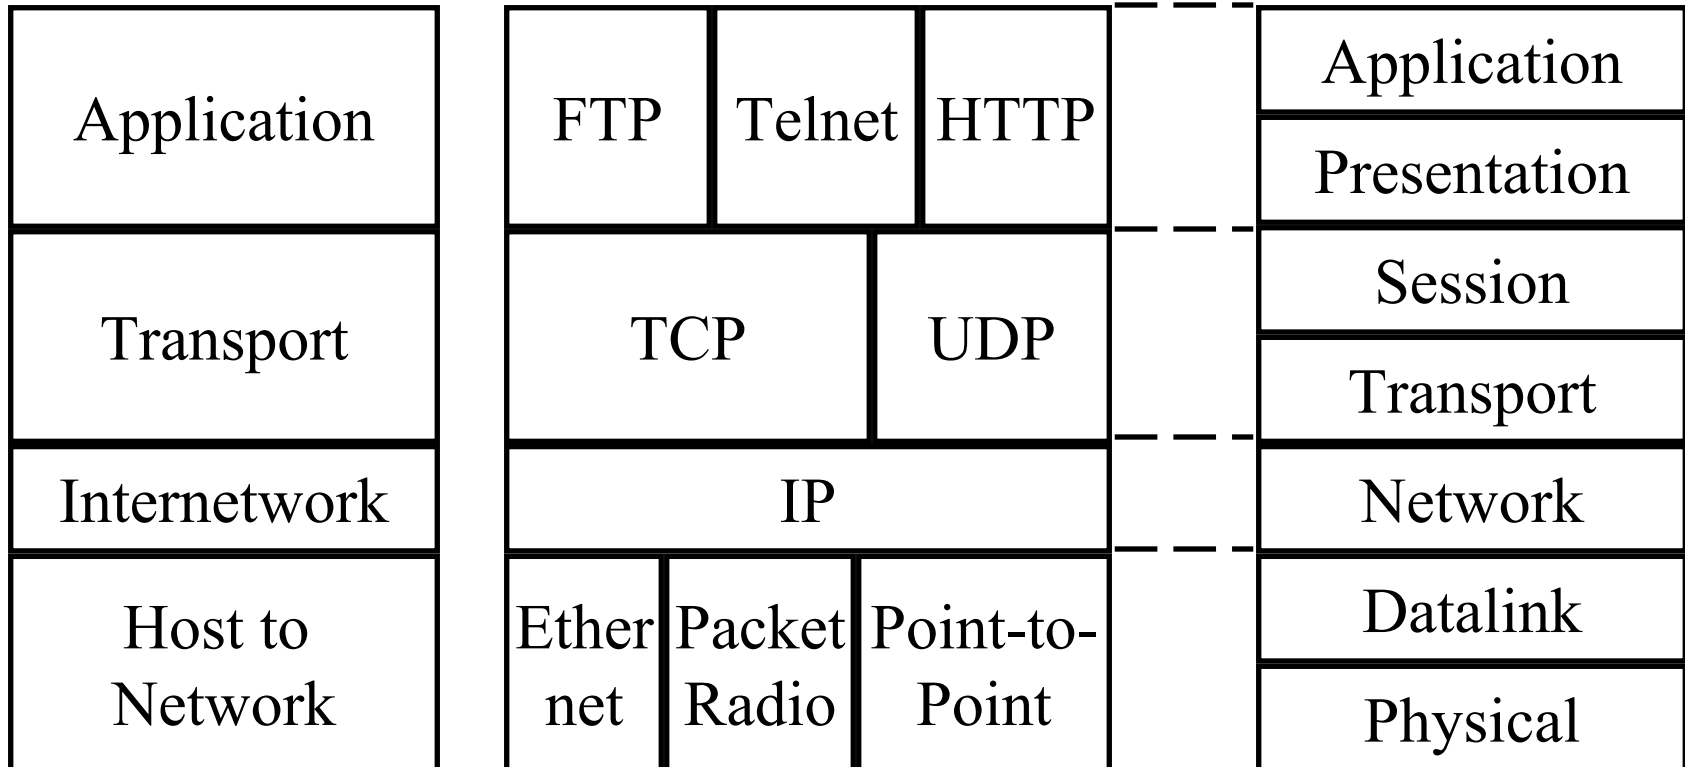

TCP/IP Reference Model

- ❑ TCP = Transport Control Protocol
- ❑ IP = Internet Protocol (Routing)

TCP/IP Ref Model

TCP/IP Protocols

OSI Ref Model

Channel Capacity

- Capacity = Maximum data rate for a channel
- **Nyquist Theorem:** Bandwidth = W
Data rate $\leq 2 W$
- Bilevel Encoding: Data rate = $2 \times$ Bandwidth

- Multilevel Encoding: Data rate = $2 \times$ Bandwidth $\times \log_2 M$

Example: $M=4$, Capacity = $4 \times$ Bandwidth

Shannon's Theorem

- Bandwidth = H Hz
Signal-to-noise ratio = S/N
- Maximum number of bits/sec = $H \log_2 (1+S/N)$
- Example: Phone wire bandwidth = 3100 Hz

$$S/N = 30 \text{ dB}$$

$$10 \text{ Log}_{10} S/N = 30$$

$$\text{Log}_{10} S/N = 3$$

$$S/N = 10^3 = 1000$$

$$\begin{aligned} \text{Capacity} &= 3100 \log_2 (1+1000) \\ &= 30,894 \text{ bps} \end{aligned}$$

Coding Terminology

- ❑ Signal element: Pulse
- ❑ Modulation Rate: $1/\text{Duration of the smallest element}$
=Baud rate
- ❑ Data Rate: Bits per second
- ❑ Data Rate = $F_n(\text{Bandwidth, signal/noise ratio, encoding})$

Coding Design

- ❑ Pulse width indeterminate: Clocking
- ❑ DC, Baseline wander
- ❑ No line state information
- ❑ No error detection/protection
- ❑ No control signals
- ❑ High bandwidth
- ❑ Polarity mix-up \Rightarrow Differential (compare polarity)

(a) Multiple Access

(b) Carrier-Sense Multiple Access with Collision Detection

CSMA/CD

- ❑ Aloha at Univ of Hawaii:
Transmit whenever you like
Worst case utilization = $1/(2e) = 18\%$
- ❑ Slotted Aloha: Fixed size transmission slots
Worst case utilization = $1/e = 37\%$
- ❑ CSMA: Carrier Sense Multiple Access
Listen before you transmit
- ❑ p-Persistent CSMA: If idle, transmit with probability p . Delay by one time unit with probability $1-p$
- ❑ CSMA/CD: CSMA with Collision Detection
Listen while transmitting. Stop if you hear someone else

IEEE 802.3 CSMA/CD

- ❑ If the medium is idle, transmit (1-persistent).
- ❑ If the medium is busy, wait until idle and then transmit immediately.
- ❑ If a collision is detected while transmitting,
 - ❑ Transmit a jam signal for one slot
(= 51.2 μ s = 64 byte times)
 - ❑ Wait for a random time and reattempt (up to 16 times)
 - ❑ Random time = Uniform[0, $2^{\min(k,10)}-1$] slots
- ❑ Collision detected by monitoring the voltage
 - High voltage \Rightarrow two or more transmitters \Rightarrow Collision
 - \Rightarrow Length of the cable is limited to 2 km

Ethernet Standards

- ❑ 10BASE5: 10 Mb/s over coaxial cable (ThickWire)
- ❑ 10BROAD36: 10 Mb/s over broadband cable, 3600 m max segments
- ❑ 1BASE5: 1 Mb/s over 2 pairs of UTP
- ❑ 10BASE2: 10 Mb/s over thin RG58 coaxial cable (ThinWire), 185 m max segments
- ❑ 10BASE-T: 10 Mb/s over 2 pairs of UTP
- ❑ 10BASE-FL: 10 Mb/s fiber optic point-to-point link
- ❑ 10BASE-FB: 10 Mb/s fiber optic backbone (between repeaters). Also, known as synchronous Ethernet.

Ethernet Standards (Cont)

- ❑ 10BASE-FP: 10 Mb/s fiber optic passive star + segments
- ❑ 10BASE-F: 10BASE-FL, 10BASE-FB, or 10BASE-FP
- ❑ 100BASE-T4: 100 Mb/s over 4 pairs of CAT-3, 4, 5 UTP
- ❑ 100BASE-TX: 100 Mb/s over 2 pairs of CAT-5 UTP or STP
- ❑ 100BASE-FX: 100 Mbps CSMA/CD over 2 optical fiber

Ethernet Standards (Cont)

- ❑ 100BASE-X: 100BASE-TX or 100BASE-FX
- ❑ 100BASE-T: 100BASE-T4, 100BASE-TX, or 100BASE-FX
- ❑ 1000BASE-T: 1 Gbps (Gigabit Ethernet)

IEEE 802 Address Format

- 48-bit: 1000 0000 : 0000 0001 : 0100 0011
 : 0000 0000 : 1000 0000 : 0000 1100
 = 80:01:43:00:80:0C

Organizationally Unique Identifier (OUI)		24 bits assigned by OUI Owner
Individual/ Group	Universal/ Local	
1	1	22
		24

- Multicast = “To all bridges on this LAN”
- Broadcast = “To all stations”
 = 111111...111 = FF:FF:FF:FF:FF:FF

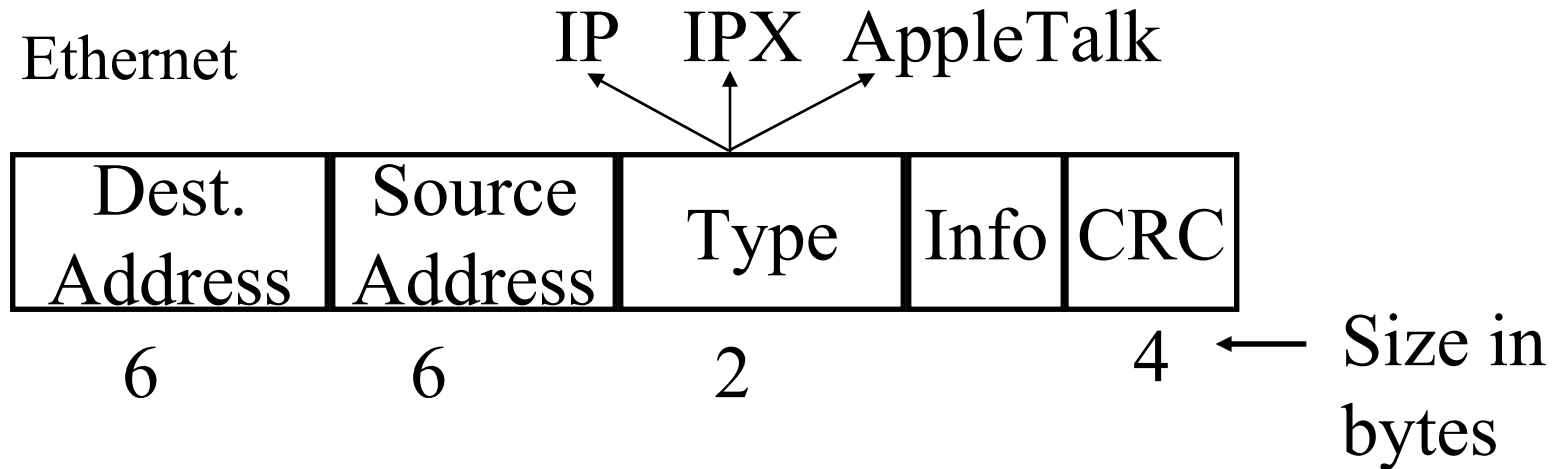

Ethernet vs IEEE 802.3

IP	IPX	IP	IPX
Ethernet		Logical Link Control (LLC)	
		Media Access Control (MAC)	

- ❑ In 802.3, datalink was divided into two sublayers: LLC and MAC
- ❑ LLC provides protocol multiplexing. MAC does not.
- ❑ MAC does not need a protocol type field.

Frame Format

□ Ethernet

□ IEEE 802.3

LLC Type 1

- Unacknowledged connectionless (on 802.3)
No flow or error control.
Provides protocol multiplexing.
Uses 3 types of protocol data units (PDUs):
UI = Unnumbered informaton
XID = Exchange ID
= Types of operation supported, window
Test = Loop back test

LLC Type 2, 3

- ❑ Type 2: Acknowledged connection oriented (on 802.5)
Provides flow control, error control. Uses SABME (Set asynchronous balanced mode), UA (unnumbered ack), DM (disconnected mode), DISC (disconnect)
- ❑ Type 3: Acknowledged connectionless
Uses one-bit sequence number
AC command PDUs acked by AC response PDUs

Interconnection Devices

- ❑ **Repeater:** PHY device that restores data and collision signals
- ❑ **Hub:** Multiport repeater + fault detection and recovery
- ❑ **Bridge:** Datalink layer device connecting two or more collision domains. MAC multicasts are propagated throughout “extended LAN.”
- ❑ **Router:** Network layer device. IP, IPX, AppleTalk. Does not propagate MAC multicasts.
- ❑ **Switch:** Multiport bridge with parallel paths

These are functions. Packaging varies.

Interconnection Devices

2. Spanning Tree

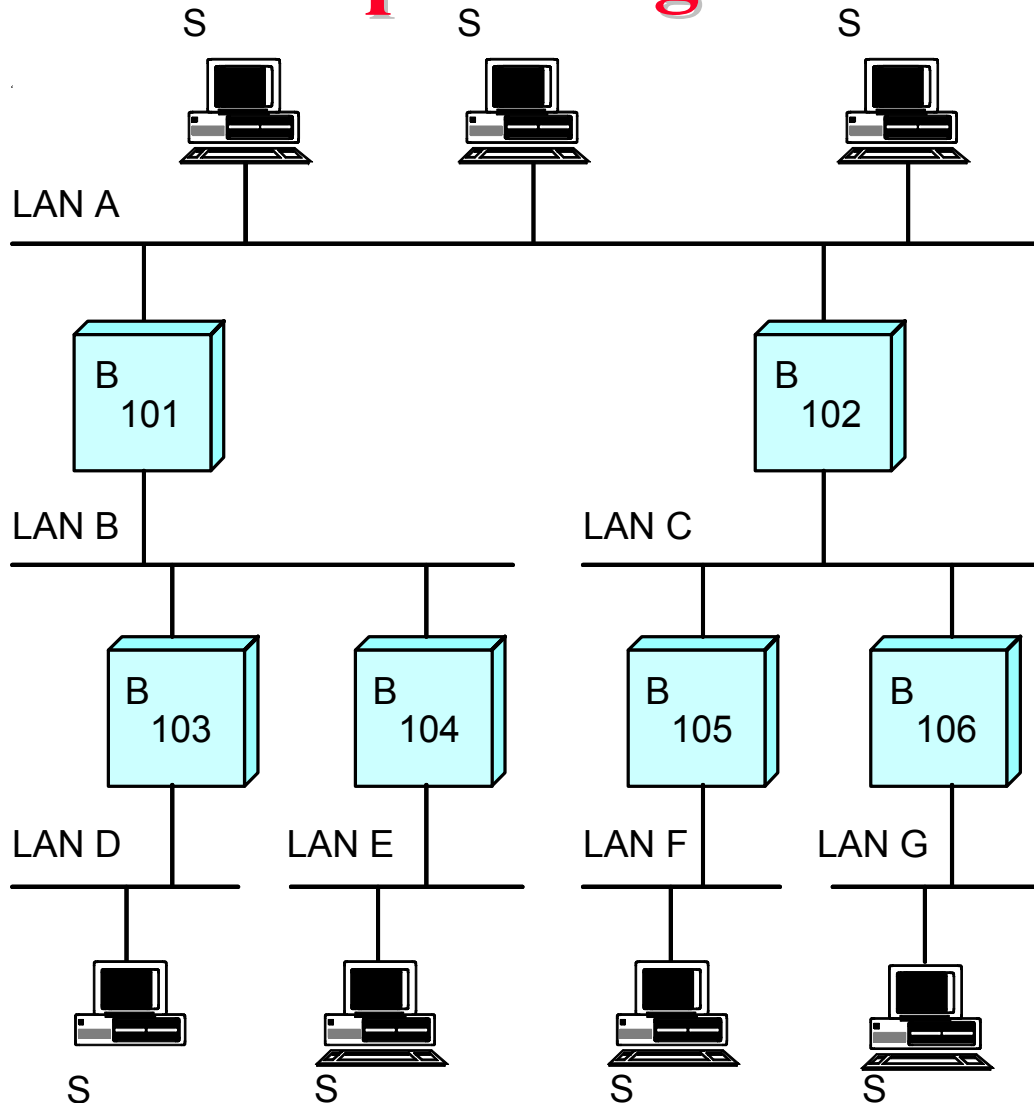

Fig 14.5

Spanning Tree (Cont)

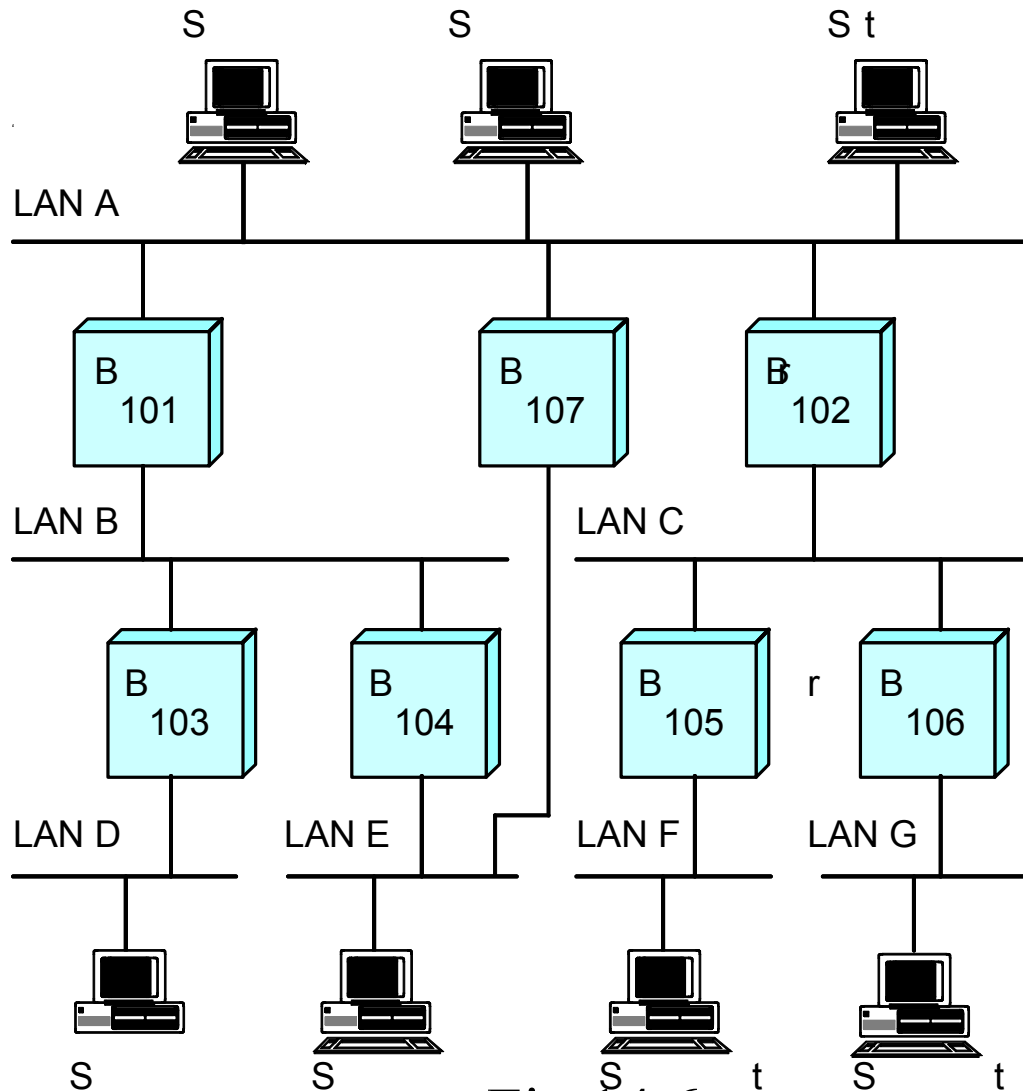

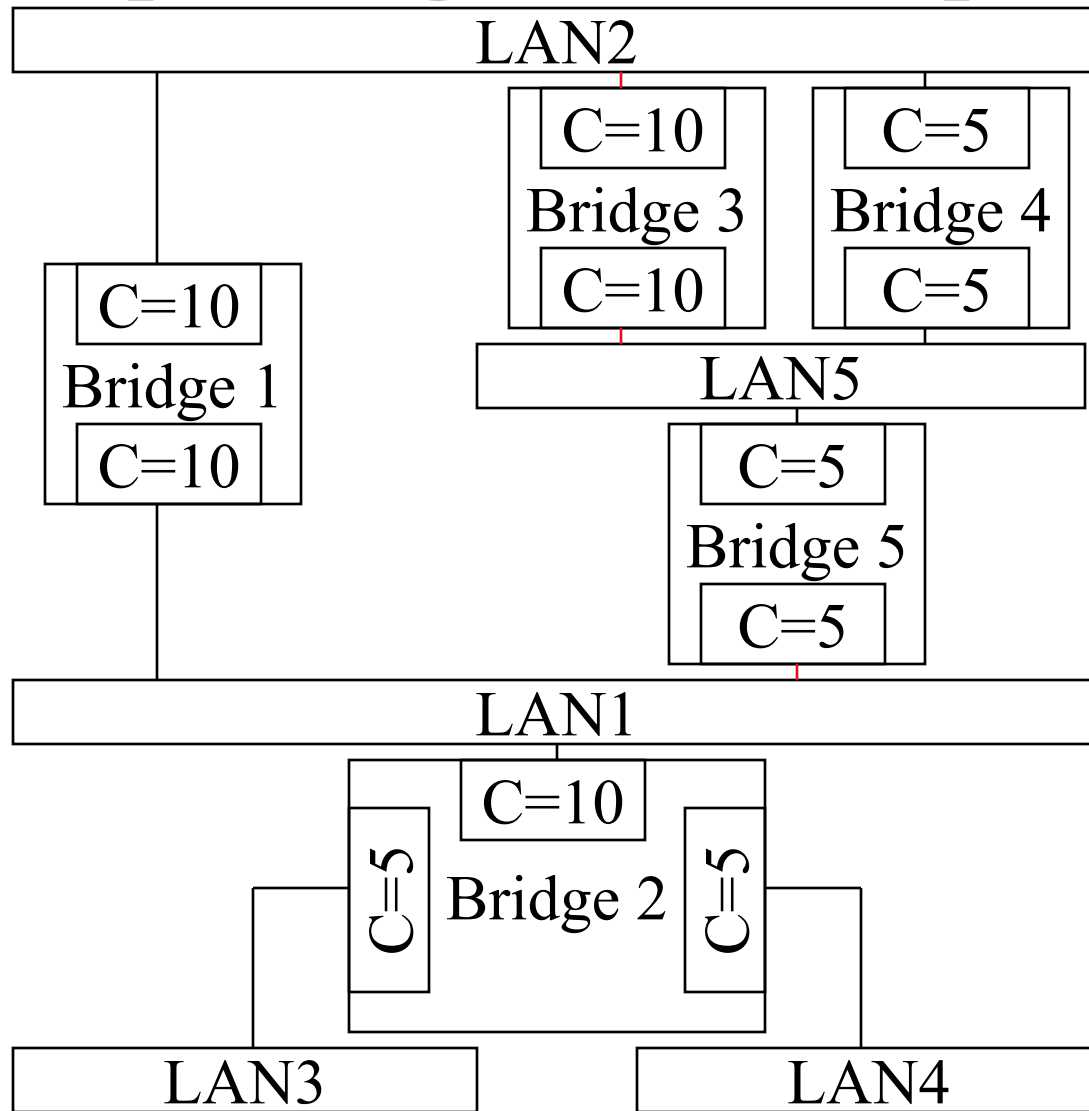

Fig 14.6

Spanning Tree Algorithm

- ❑ All bridges multicast to “All bridges”
 - ❑ My ID
 - ❑ Root ID
 - ❑ My cost to root
- ❑ The bridges update their info using Dijkstra’s algorithm and rebroadcast
- ❑ Initially all bridges are roots but eventually converge to one root as they find out the lowest Bridge ID.
- ❑ On each LAN, the bridge with minimum cost to the root becomes the Designated bridge
- ❑ All ports of all non-designated bridges are blocked.

Spanning Tree Example

The Magic Word α

Distance-B/W Principle

- Efficiency = Max throughput/Media bandwidth
- Efficiency is a nonincreasing function of α
 $\alpha = \text{Propagation delay} / \text{Transmission time}$
 $= (\text{Distance} / \text{Speed of light}) / (\text{Transmission size} / \text{Bits/sec})$
 $= \text{Distance} \times \text{Bits/sec} / (\text{Speed of light}) (\text{Transmission size})$
- Bit rate-distance-transmission size tradeoff.
- 100 Mb/s \Rightarrow Change distance or frame size

(a) Multiple Access

(b) Carrier-Sense Multiple Access with Collision Detection

Ethernet vs Fast Ethernet

	Ethernet	Fast Ethernet
Speed	10 Mbps	100 Mbps
MAC	CSMA/CD	CSMA/CD
Network diameter	2.5 km	205 m
Topology	Bus, star	Star
Cable	Coax, UTP, Fiber	UTP, Fiber
Standard	802.3	802.3u
Cost	X	2X

Full-Duplex Ethernet

- ❑ Uses point-to-point links between **TWO** nodes
- ❑ Full-duplex bi-directional transmission
- ❑ Transmit any time
- ❑ Many vendors are shipping switch/bridge/NICs with full duplex
- ❑ No collisions \Rightarrow 50+ Km on fiber.
- ❑ Between servers and switches or between switches

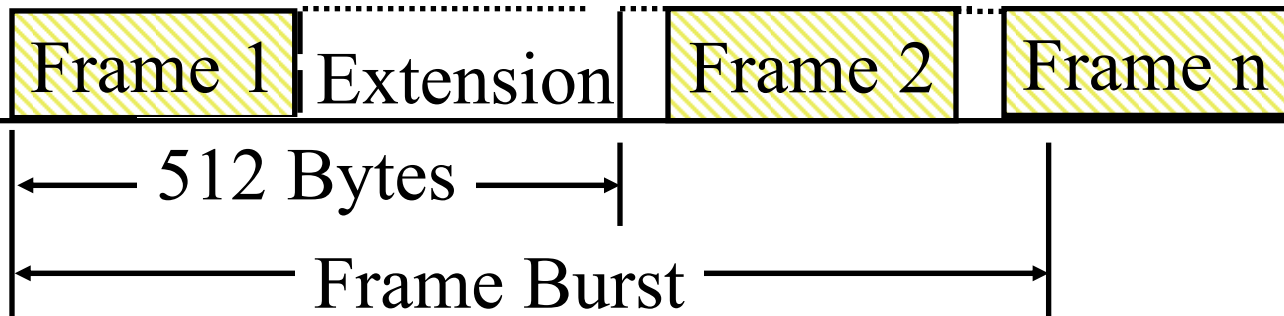

Carrier Extension

- ❑ 10 Mbps at 2.5 km \Rightarrow Slot time = 64 bytes
- ❑ 1 Gbps at 200 m \Rightarrow Slot time = 512 bytes
- ❑ Continue transmitting control symbols.
Collision window includes the control symbols
- ❑ Control symbols are discarded at the destination
- ❑ Net throughput for small frames is only marginally better than 100 Mbps

Frame Bursting

Extension bits

- ❑ Don't give up the channel after every frame
- ❑ After the slot time, continue transmitting additional frames (with minimum inter-frame gap)
- ❑ Interframe gaps are filled with extension bits
- ❑ No no new frame transmissions after 8192 bytes
- ❑ Three times more throughput for small frames

1000Base-X

- ❑ 1000Base-LX: 1300-nm laser transceivers
 - ❑ 2 to 550 m on 62.5- μm or 50- μm multimode, 2 to 3000 m on 10- μm single-mode
- ❑ 1000Base-SX: 850-nm laser transceivers
 - ❑ 2 to 300 m on 62.5- μm , 2 to 550 m on 50- μm . Both multimode.
- ❑ 1000Base-CX: Short-haul copper jumpers
 - ❑ 25 m 2-pair shielded twinax cable in a single room or rack.
Uses 8b/10b coding \Rightarrow 1.25 Gbps line rate

100Base-T

- ❑ 100 m on 4-pair Cat-5 UTP
⇒ Network diameter of 200 m
- ❑ 250 Mbps/pair full duplex DSP based PHY
⇒ Requires new 5-level (PAM-5) signaling with 4-D 8-state Trellis code FEC
- ❑ Automatically detects and corrects pair-swapping, incorrect polarity, differential delay variations across pairs
- ❑ Autonegotiation ⇒ Compatibility with 100Base-T
- ❑ 802.3ab task force began March'97, ballot July'98, Final standard by March'99.

Summary

- ❑ ISO/OSI reference model has seven layers.
TCP/IP Protocol suite has four layers.
- ❑ Ethernet/IEEE 802.3 uses CSMA/CD.
- ❑ Configuration rules depend upon physical medium
10Base5, 10Base2, 10Base-T, 100Base-TX, etc.
- ❑ Addresses: Local vs Global, Unicast vs Broadcast.
