12-1

Overview

- Recent Protocols for IoT
- □ Power Line Communication (PLC)
- □ HomePlug, HomePlug AV, HomePlug AV2, BPL, Netricity
- IEEE 1905.1 Management, Security, and Configuration
- Smart Cards

Note: This is part 2 of a series of class lectures on IoT. Wireless datalink protocols are covered in CSE 574 Wireless Network Class. More protocols are covered in other parts of this series.

L2 Protocols for IoT

Most of the L2 IoT protocols are wireless.

- □ Wireless Protocols: WiFi, Bluetooth Low Energy, Z-Wave, ZigBee Smart, DECT/ULE, 3G/LTE, NFC, Weightless, IEEE 802.11ah, IEEE 802.15.4, G9959, WirelessHart, DASH7, ANT+, LTE-A, LoraWAN, ISA 100.11a, DigiMesh, etc. These are covered in CSE 574 Wireless and Mobile Networking class.
- Wired Protocols: In this lecture, we cover Powerline Communications (HomePlug GP) and associated management protocols

http://www.cse.wustl.edu/~jain/cse570-18/ Washington University in St. Louis

12-3 12-4

Power Line Communication (PLC)

- Started in 1950 for remote ignition and lighting of street lights. 100 Hz and 1 kHz signals over electrical wires
- ☐ Two way systems using 3-148.5 kHz for reading electric meters, and home automation, alarms etc.

12-5

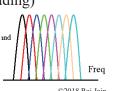

OFDM

- □ Orthogonal Frequency Division Multiplexing
- Ten 100 kHz channels are better than one 1 MHz Channel ⇒ Multi-carrier modulation

- ☐ Frequency band is divided into 256 or more sub-bands. Orthogonal ⇒ Peak of one at null of others
- Each carrier is modulated with a **BPSK** (2bps/Hz), **QPSK** (4 bps/Hz), 16-QAM (8bps/Hz), 64-QAM (16 bps/Hz) etc depending on the noise (Frequency selective fading)
- □ Used in 802.11a/g, 802.16, Digital Video Broadcast handheld (DVB-H) and
- Easy to implement using FFT/IFFT

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse570-18/

Washington University in St. Louis

Broadband Over Power Lines (BPL)

- High-speed internet connection using power lines (like DSL)
- □ Also known as HomePlug-BPL. Incorporated in IEEE 1901-2010
- Not cost competitive with optical fiber or DSL ⇒ Suitable only for remote locations
- ☐ High-frequency signal cannot pass through transformers and so the signal has to be bypassed using a repeater
- \square In US, 1 transformer per house \Rightarrow Very expensive In Europe: 1 transformer per 10-100 houses ⇒ More cost effective
- Radio frequency interference with existing wireless services is avoided using OFDM

Ref: http://en.wikipedia.org/wiki/Broadband_over_power_lines
W_shipato Hairoseity in St. Louie http://www.cse.wustl.edu/~jain/cse570-18/

©2018 Rai Jain

12-6

HomePlug

- □ HomePlug 1.0
- □ HomePlug AV
- □ HomePlug AV2
- □ HomePlug GP
- □ HomePlug BPL

http://www.cse.wustl.edu/~jain/cse570-18

12-7

Television Air Conditioner Refrigerator Projector 2012/10 2013/03 2013/11 2013/12 Washington University in St. Louis http://www.csc.wustl.edu/-jain/csc570-18/ 22-9

HomePlug AV (Cont)

- **Robust OFDM** (ROBO) mode for highly reliable transmission. The same information is transmitted on 2-5 subcarriers using a low-bit rate modulation
- ☐ Use only Line-neutral pair (ground is not used)
- □ Four channel access priorities

Washington University in St. Louis

- MAC is similar to that of WiFi
 ⇒ Carrier Sense Multiple Access (CSMA).
- □ All devices part of the same trust domain form a "AV Logical Network (AVLN)."
- □ All members of the AVLN share a Network Membership Key 128-bit AES.
- ☐ Each AVLN has a central coordinator (CCo)

http://www.cse.wustl.edu/~jain/cse570-18/

©2018 Raj Jain

HomePlug AV

- □ HomePlug Alliance: Industry consortium for power line communications Disbanded in October 2016.
- □ 90% of PLC devices use HomePlug
- 1.8 MHz to 30 MHz spectrum = 28 MHz \Rightarrow 20 to 200 Mbps
- Multipath distortion
- □ Orthogonal Frequency Division Multiplexing (OFDM):
 Using 1155 carriers at 24.414 kHz spacing of which 917 are used for signal.
 Rest as pilots.
- Adaptive bit loading: Each carrier is modulated based on the noise level and multipath at that frequency.
 2-bits/symbol to 10 bits/symbol.
- □ **Tone Maps**: Each receiver keeps a table of signal strengths from each of the other receivers ⇒ n-1 tone maps in a n-device system

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse570-18/

©2018 Rai Jain

12-10

HomePlug AV (Cont)

- □ CCo transmits beacons containing schedule
- □ Long best effort transmissions declare their queues to CCo and use a pre-allocated **persistent shared CSMA** region
- □ Short best effort transmissions use **non-persistent CSMA** region.
- ☐ Real-time traffic uses periodic time division multiple access (TDMA) allocation in the **contention-free** period
- Before video transmission, the transmitter tests the channel for achievable throughput. Helps determine the required transmission interval per beacon period

Beacon Persistent Shared Non-Persistent Region CSMA Region Local CSMA Local CSMA

Non-Persistent Persistent Local CSMA Allocation

Persistent Allocation n

12-11

HomePlug AV Security

- □ A station can participate in a AVLN if it has the **Network** membership key (NMK).
 - A station with multiple keys can participate in multiple AVLNs.
- ☐ All devices have a default NMK and so can form the network. Users should program the devices to use specific NMK.
- ☐ Once a devices has a NMK, it will be given the **network encryption key** which is used to encrypt the data.
- ☐ If there are multiple networks on the same wire, CCos coordinate their transmission schedules

Washington University in St. Louis

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse570-18/

©2018 Rai Jair

12-13

HomePlug AV2 (Cont)

- 6. **Repeating:** Signal is demodulated and re-modulated at intermediate devices
- 7. **Better coding**: 12 bps/Hz and aggressive code rates (8/9)
- 8. **Power Control**: Manage transmission power to enhance coverage and throughput
- 9. **Power Save**: Stations can declare sleep periods. Other transmit only when the destination is awake.

http://www.cse.wustl.edu/~jain/cse570-18

©2018 Rai Iain

HomePlug AV2

- □ Gigabit networking using home powerline wiring. Peak PHY rate of 1.256 Gbps. 600 Mbps net throughput.
- □ Can transmit multiple HD video streams
- □ Compatible with HomePlug AV devices on the same wires
- 1. Additional Spectrum: 2MHz-86MHz (84 MHz)
- 2. Multiple-input Multiple-output (MIMO): transmissions using two wires with three-wire configuration (Line-Neutral, Line-Ground, Neutral-Ground)
- 3. Beam forming: Bit loading for each transmitter
- 4. Lower overhead: Shorter packet delimiter and delay acks.
- 5. Efficient notching: Of noisy carriers

Washington University in St. Louis

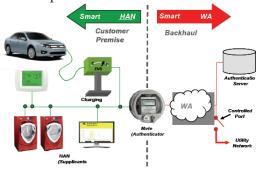

http://www.cse.wustl.edu/~jain/cse570-18/

©2018 Rai Jain

12-14

HomePlug GreenPHY

- □ Designed for **home area network (HAN)** for monitoring and control of energy consuming/controlling devices including electric vehicle charging.
- □ Low cost. Low power. Low data rate version of HomePlug AV.

hington University in St. Louis http://www.cse.wustl.edu/~jain/cse570-18

©2018 Raj Ja

12-15

HomePlug GP (Cont)

- □ HomePlug GP is a profile of **IEEE 1901-2010** standard for Powerline Networks and is compatible with HomePlug AV and HomePlug AV2.
- Arr 28 MHz \Rightarrow 256 kbps to 10 Mbps using only one modulation No tone maps.
- □ Use 75% less power than HomePlug AV. 75% less bill of materials
- □ Devices coordinate their sleep cycle and may sleep for 2^n beacon intervals, n=1,...,10
- □ HomePlug GP 1.1 adds new power management and features for electric vehicles. Secure billing is possible at a public charging station.

Washington University in St. Louis

12-17

Convergent Digital Home (Cont)

- □ Entire home looks like a single network with automated provisioning, management, and operation
- ☐ Allows a device to aggregate throughput from multiple interfaces
- □ A link can be used fallback when another link fails
- □ An abstraction layer is used to exchange Control Message Data Unit (CMDU) among 1905.1 compliant devices
- No changes to underlying technologies is required.

Network Layer				
1905.1 Abstraction Layer

©2018 Raj Jain

12-19

IEEE 1905.1 Management (Cont)

- □ ALME has messages for
 - > Neighbor discovery,
 - > Topology exchange,
 - > Topology change notification,
 - > Measured traffic statistics exchange,
 - > Flow forwarding rules, and
 - > Security associations
- ☐ HomePlug AV2 can be used as a backbone for Wi-Fi
- Existing IEEE 802.1 bridging protocols are used for loop prevention and forwarding

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse570-18

©2018 Rai Jair

12 - 2.1

Netricity

- □ Long-range outside-the-home PLC for smart grid applications
- □ Certification for IEEE 1901.2 Low Frequency, Narrowband Powerline Communications Standard is called "Netricity"

Washington University in St. Louis

//www.cse.wustl.edu/~jain/cse570-18/

©2018 Raj Jain

IEEE 1905.1 Security and Configuration

- Security Setup:
 - > **Push Button**: Press buttons on new and existing devices The new device gets the keys from the existing device
 - > User can configure passphrase/key in the new device
 - > NFC: User touches the new device with a NFC equipped smart phone which is existing member of the network
- Auto configuration:
 - New Access Points (APs) can get configuration information from existing APs
- □ The certification program for IEEE 1905.1 is called "**nVoy**" Connects disparate networks = Network Diplomat = Network Envoy ⇒ nVoy
- □ Qualcomm Atheros products implementing IEEE 1905.1 are called **Hy-Fi** (for Hybrid Fidelity)

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse570-18/

©2018 Rai Jair

12-22

Industrial Ethernet

- □ Same as regular Ethernet but with rugged connectors and designed for extended temperature/humidity environment
- □ Full duplex links (no CSMA/CD)
- Optical fibers (electrical interference)
- Min frame size of 64 byte may be too big for some applications

Ref: http://en.wikipedia.org/wiki/Industrial_Ethernet

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse570-18/

©2018 Raj Jain

IEEE 1451

- Set of smart transducer interface for sensors and actuators
- ☐ Transducer electronic data sheets (TEDS) is a memory device that stores transducer id, calibration, correction data, and manufacturer information
- □ Allows access to transducer data regardless of wired or wireless connection
- □ XML based ⇒ Allows manufacturers to change the contents

Summary

- A number of datalink protocols have been proposed for IoT. Among non-wireless protocols, the most common is HomePlug.
- 2. HomePlug has been extended to provided higher data rate of up to 600 Mbps by HomePlug AV2 standard and to a energy saving HomePlug GP.
- 3. IEEE 1905.1 provides an abstraction layer to hide the details of various datalink layers, such as, ZigBee, HomePlug, WiFi,
