Monthly Plan

1. Your plan need to clear detail the following:
   a. Each group member’s roles. Each group should have two developers, one project manager, and one tester. Below is the description for each role’s responsibility:
      1. Developer: Responsible primarily for implementing the planned features.
      2. Project Manager: Responsible for project planning, feature changes, user interface/user experience design, and client communication (if applicable).
      3. Tester: Responsible for app testing and bug reporting.

      Please note that if your group has less than three people, all the roles above will still need to be assigned, meaning that one person can have multiple roles.
   b. Each group member’s assignments every week. We will check the completion of all these assignments in the weekly standups. More details about how we grade the completion will be available in weekly standup rubric.
   c. That being said, each member is not confined to their own assignments and is encouraged to help each other out when needed.

2. The work needs to be distributed evenly throughout the month.

3. The work assigned to each individual must be comparable to each other.
